Introduction

# **UNIX Philosophy**

Focused on modularity & reusability.

It can be summarized as:

- O Write programs that do one thing and do it well.
- Write programs to work together.
- O Write programs to handle text streams, because that is a universal interface.

Tejas Sanap 4 (31)

# **Basic Operations**

All operations performed in the terminal can be categorized as:

- Search for text (in files).
  - ∘ cat, head, tail, wc
  - grep
- Search for files (in directories).
  - find, locate
- Manipulate text (in files).
  - sed, awk, cut
- Manipulate files (in directories).
  - ∘ cp, scp, rm, mv
  - gzip, tar
- Manipulate file permission and ownership.

#### **GNU Coreutils**

The GNU Core Utilities are the basic file, shell and text manipulation utilities of the GNU operating system.

They are expected to be present on every operating system.

Previously, the core utilities were implemented by the following pacakages:

- 1 fileutils
- 2 shellutils
- 3. textutils

In 2003, these three packages were combined into the current **coreutils** package.

### Text editors

Do we really need Vim?

Text

# cat, head, tail, wc

Utilities to view file content

#### Example

cat -A -n -s torrent-trackers

#### Example

head -n 10 torrent-trackers

#### Example

tail -n 10 torrent-trackers

#### Example

wc torrent-trackers

#### wc - Output

465 233 9585 torrent-trackers newline, wordcount, bytes, filename

grep prints line that matches a certain pattern.

#### Syntax

grep OPTIONS PATTERN INPUT\_FILE\_NAMES

#### Example

```
$ grep --color=always "anime" torrent-tracker
udp://tc.animereactor.ru:8082/announce
udp://tc.animereactor.ru:8082/announce
```

O Manipulate

# grep

#### The exit status of grep when:

- line is selected is 0.
- ono line is selected is 1.
- an error occurs is 2.

#### Useful grep options:

- -i ignore case
- ¬v invert matches
- -c count no. of matching lines
- -n prefic each line with line number
- -1 print name of the file and suppress all other output
- -H print filename for each match
- -o print only the matched parts of a line
- -s suppress error messages
- --color color the matching content
  - -a accept binary input
- --label=LABEL display input actually coming from stdin as input from file I.ABEL.

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2. We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

#### Example

\$ tar -xf python\_code.tar.gz

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2. We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

#### Example

\$ tar -xzf python\_code.tar.gz

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2. We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

#### Example

```
$ tar -xzf python_code.tar.gz --to-command='grep
main'
```

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2. We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

### Example

```
$ tar -xzf python_code.tar.gz --to-command='grep -a
main'
```

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2. We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

### Example

```
$ tar -xzf python_code.tar.gz --to-command='grep -a
-H main'
```

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2 We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

#### Example

```
$ tar -xzf python_code.tar.gz --to-command='grep -a
-H --label="$TAR_FILENAME" main'
```

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2 We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

### Example

```
$ tar -xzf python_code.tar.gz --to-command='grep -a
-H --label="$TAR_FILENAME" -n main'
```

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2 We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

### Example

```
$ tar -xzf python_code.tar.gz --to-command='grep -a
-H --label="$TAR_FILENAME" -c main'
```

#### Task

- 1. We have a tar file named python\_code.tar.gz
- 2 We want to search for a function named main
- 3. But, without, extracting or decompressing the tar file

#### Example

```
$ tar -xzf python_code.tar.gz --to-command='grep -a
-H --label="$TAR_FILENAME" -c -s main'
```
